

09/871,928

**REMARKS**

Reconsideration of the application in view of the present amendment is respectfully requested.

Claims 19-32 are canceled. New claims 33-38 are added. Accordingly, claims 1-32 are canceled, and claims 33-38 are pending. It is believed that each of claims 33-38 patentably defines over the prior art including the prior art references of record.

Claim 33 recites an automated teller machine comprising a cash dispenser for dispensing cash to a user, a port for outputting cash dispense transaction details to a user, means for accessing from a repository a company symbol pre-selected by a user to obtain a current market value of a share for that company, means for appending the obtained current market value of the share to transaction details relating to a cash dispense transaction requested by the user, and means for delivering the cash dispense transaction details and the appended current market value of the share to the user in a single delivery via the port so that the user is automatically provided with an up-to-date share price when a cash dispense transaction is executed.

None of the prior art including the prior art references of record discloses or suggests an automated teller machine comprising means for accessing from a repository a company symbol pre-selected by a user to obtain a current market value of a share for that company, means for appending the obtained current market value of the share to transaction details relating to a cash dispense transaction requested by the user, and means for delivering the cash dispense transaction details and the appended current market value of the share to the user in a single delivery via the port so that the user is automatically provided with an up-to-date share price when a cash dispense transaction is executed. Thus, claim 33 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 34 recites an automated teller machine (ATM) comprising means for (i) enabling an ATM customer to carry out an ATM transaction, and (ii) providing ATM transaction details associated with the ATM transaction, means for accessing from a repository time-varying information which is unrelated to the ATM transaction and which has been pre-selected by the ATM customer to obtain a current market value of the time-

09/871,928

varying information while the ATM customer is carrying out the ATM transaction, means for printing on an ATM transaction receipt the ATM transaction details and the current market value of the time-varying information which is unrelated to the ATM transaction, and means for delivering the ATM transaction receipt to the ATM customer when the ATM customer has completed the ATM transaction.

None of the prior art including the prior art references of record discloses or suggests an automated teller machine (ATM) comprising means for accessing from a repository time-varying information which is unrelated to the ATM transaction and which has been pre-selected by the ATM customer to obtain a current market value of the time-varying information while the ATM customer is carrying out the ATM transaction, means for printing on an ATM transaction receipt the ATM transaction details and the current market value of the time-varying information which is unrelated to the ATM transaction, and means for delivering the ATM transaction receipt to the ATM customer when the ATM customer has completed the ATM transaction. Thus, claim 34 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 35 recites a self-service terminal comprising means for (i) enabling a user to conduct a financial transaction which is other than a retail transaction, and (ii) providing transaction details associated with the financial transaction, means for accessing from a repository time-varying information which is unrelated to the financial transaction and which has been pre-selected by the user to obtain a current market value of the time-varying information while the user is carrying out the financial transaction which is other than a retail transaction, means for printing on a single receipt the transaction details and the current market value of the time-varying information which is unrelated to the financial transaction which is other than a retail transaction, and means for delivering the single receipt to the user when the user has completed the financial transaction which is other than a retail transaction.

None of the prior art including the prior art references of record discloses or suggests a self-service terminal comprising means for accessing from a repository time-varying information which is unrelated to the financial transaction and which has been pre-selected by the user to obtain a current market value of the time-varying information while the user is

09/871,928

carrying out the financial transaction which is other than a retail transaction, means for printing on a single receipt the transaction details and the current market value of the time-varying information which is unrelated to the financial transaction which is other than a retail transaction, and means for delivering the single receipt to the user when the user has completed the financial transaction which is other than a retail transaction. Thus, claim 35 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 36 recites a method of operating a self-service terminal to enable a user to conduct a financial transaction which is other than a retail transaction. The method comprises providing transaction details associated with the financial transaction which is other than a retail transaction, accessing from a repository time-varying information which is unrelated to the financial transaction and which has been pre-selected by the user to obtain a current market value of the time-varying information while the user is carrying out the financial transaction which is other than a retail transaction, printing on a single receipt the transaction details and the current market value of the time-varying information which is unrelated to the financial transaction which is other than a retail transaction, and delivering the single receipt to the user when the user has completed the financial transaction which is other than a retail transaction.

None of the prior art including the prior art references of record discloses or suggests a method of operating a self-service terminal to enable a user to conduct a financial transaction which is other than a retail transaction, wherein the method comprises providing transaction details associated with the financial transaction which is other than a retail transaction, accessing from a repository time-varying information which is unrelated to the financial transaction and which has been pre-selected by the user to obtain a current market value of the time-varying information while the user is carrying out the financial transaction which is other than a retail transaction, printing on a single receipt the transaction details and the current market value of the time-varying information which is unrelated to the financial transaction which is other than a retail transaction, and delivering the single receipt to the user when the user has completed the financial transaction which is other than a retail

09/871,928

transaction.. Thus, claim 36 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 37 recites a self-service terminal comprising a port for outputting transaction details to a user, means for determining if the user has previously requested to receive a current news article when receiving transaction details, means for accessing a current news article from a repository providing news articles, means for appending the obtained current news article to transaction details, and means for delivering the transaction details and the appended current news article to the user via the port, so that the user automatically receives a current news article if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a self-service terminal comprising means for determining if the user has previously requested to receive a current news article when receiving transaction details, means for accessing a current news article from a repository providing news articles, means for appending the obtained current news article to transaction details, and means for delivering the transaction details and the appended current news article to the user via the port, so that the user automatically receives a current news article if the user has previously requested such a service. Thus, claim 37 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

Claim 38 recites a method of operating a self-service terminal. The method comprises determining if a user has previously requested to receive a current news article when receiving self-service transaction details, accessing a current news article from a repository providing news articles, appending the obtained current news article to self-service transaction details, and delivering the self-service transaction details and the appended current news article to the user so that the user automatically receives a current news article if the user has previously requested such a service.

None of the prior art including the prior art references of record discloses or suggests a method of operating a self-service terminal, wherein the method comprises determining if a user has previously requested to receive a current news article when receiving self-service transaction details, accessing a current news article from a repository providing news articles, appending the obtained current news article to self-service transaction details, and

09/871,928

delivering the self-service transaction details and the appended current news article to the user so that the user automatically receives a current news article if the user has previously requested such a service. Thus, claim 38 patentably defines over the prior art including the prior art references of record, whether taken singularly or in combination, and is therefore allowable.

In view of the foregoing, it is submitted that the application is in condition for allowance, and allowance of the application is respectfully requested.

Respectfully submitted,
